

Affinity Stone Rewards

Employee Rewards & Merchandise Shop

What It Is

Affinity Stone Rewards is an employee rewards program that lets staff redeem earned points for company-branded merchandise. Employees request access, earn points through accomplishments, and shop a catalog of apparel, drinkware, bags, electronics, and office supplies—all paid with points, not cash.

How It Works

1. Request Access — Users submit their work email; admins review and approve, then send login instructions via email.
2. Earn Points — Points are awarded for achievements and contributions. Admins can add points manually or via bulk upload.
3. Shop — Browse the catalog with filters (category, collections, size, color, price). Products display point prices based on a configurable USD-to-points conversion rate.
4. Checkout — Add items to cart, choose delivery or pickup, enter shipping address, and place order. Points are deducted on order placement.
5. Track — Users view order history and points transaction history. Admins manage orders, update statuses, and fulfill shipments.

Tech Stack

Next.js 15 • React 19 • Supabase (auth, database) • Resend (email) • Tailwind CSS • pnpm monorepo with shared core package

User Features

Marketing home • Request access • Login / forgot password • Dashboard (product catalog) • Product detail with variants (size/color) • Cart • Checkout (delivery/pickup) • Order history • Profile & address • Points history

Admin Features

Dashboard (users, products, orders) • User management (create, invite) • Product CRUD with variant matrix • Points adjustments & bulk upload • Order management & status updates • Reports • CSV exports • Conversion rate config • Monthly export (Supabase Edge Function)
